

MeterIt Pro — Cloud Electricity Meter Management

MeterIt Pro is a cloud-based electricity meter data management platform for meter manufacturers, resellers, utilities and facility teams. Automate readings, validate data, generate reports and query your portfolio with AI — across a single site or hundreds of locations, from any browser.

RBAC

Role-based access per
tenant

Portfolio home dashboard — energy, peak demand, active meters and open alerts at a glance, with live recent activity and favorite registers.

Core Capabilities

Purpose-built electricity metering software that keeps every reading accurate, traceable and easy to analyze — one platform for capture, validation, analytics, alerting and reporting.

Smart Meter Capture

Mobile-friendly workflows guide technicians through every reading. Physical and virtual electricity meters, captured at the register and circuit level.

Validation & Anomaly Detection

Automatic quality checks flag anomalies and missing data before reports go out, so your data stays audit-ready.

Energy Analytics & Reporting

Track usage trends, peak demand and cost efficiency across all meters. Export to PDF or CSV for billing, audits and analysis.

Multi-Site Portfolio

Manage readings across hundreds of locations from a single dashboard — ideal for ESCOs, property managers and facility teams.

Alerts & Notifications

Set threshold-based rules on any register and get notified instantly when readings fall outside expected ranges.

AI-Ready Data Platform

Query your meter data in plain language with the built-in Zenith assistant. Built for AI integration from day one.

Full Visibility, Access Anywhere

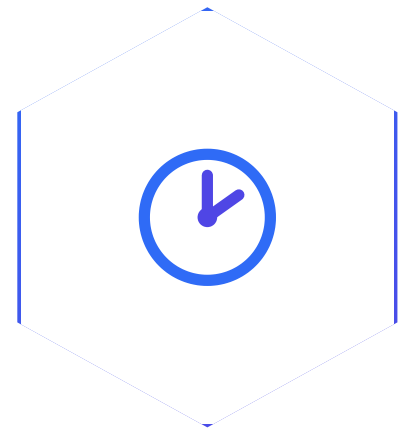

- Live dashboard updates — no manual refresh or exports
- Desktop, tablet or mobile on any modern browser
- Role-based access — field, manager and client views
- Secure, encrypted connections (HTTPS/TLS)
- Tenant-level data isolation across every account
- Share read-only portfolio views with stakeholders

Meters & Registers

Every meter is modelled with its own registers (elements) — Mains, A/C, Receptacles and more — so consumption is tracked at the circuit level, not just the building level.

- | | |
|---------------|--------------------------------------|
| Step 1 | Name the meter & assign its location |
| Step 2 | Choose physical or virtual meter |
| Step 3 | Assign device model & sync server |
| Step 4 | Map registers / elements |
| Step 5 | Set alert rules on any register |
| Step 6 | Assign role-based user access |

Meter Types

Physical meters

Bound to a device on a sync server — MeterIt Pro polls it for live readings.

Virtual meters

Derived from other meters (e.g. “mains less lighting”) — no hardware required.

Per-Meter Registers

- Multiple registers / elements per meter
- Named channels: Mains, A/C, Receptacles...
- Per-register readings, graphs & alerts
- Serial, IP, sync server & live status

Meter list — physical and virtual meters, each tied to a device, IP address, sync server and live status.

Dashboards & Analytics

Compose custom dashboards from configurable chart widgets. Set the time range, chart type, granularity and aggregation on each widget — then refresh, export or email it.

- Multiple dashboards per user
- Drag-and-drop widget layout
- Range: since install, daily or custom
- Granularity down to 15-minute intervals
- Aggregation: max, min, average, sum
- Per-widget refresh, export & email

Custom dashboard — a Peak kW widget with configurable range, chart type, granularity and aggregation. Build the exact view each team needs.

Alerts & Notifications

Define alert rules once and let the platform watch every register around the clock. Catch a stalled meter or a runaway load before your clients do.

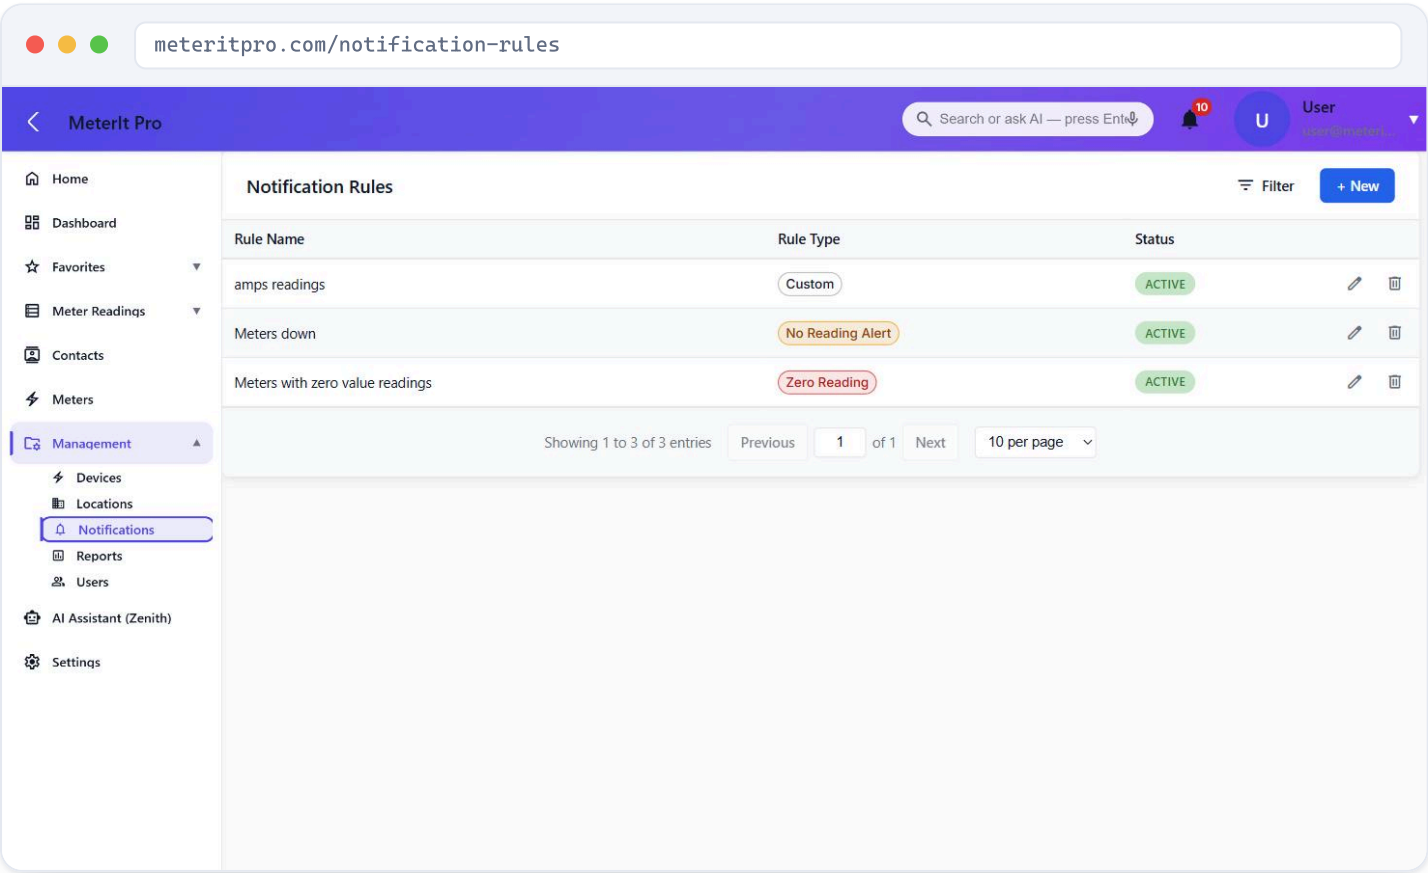

Rule Types

- Custom** threshold rules on any parameter
- No Reading** when a meter goes silent
- Zero Reading** for dead or stalled channels
- Active / inactive per rule, with full history

Notification Channels

- In-app banner on the platform
- Email alerts with a link to the meter in alarm
- Threshold breach, over-interval & over-time
- Scheduled scans clear stale notifications

Notification rules — custom, no-reading and zero-reading rule types, each toggled active or inactive per register.

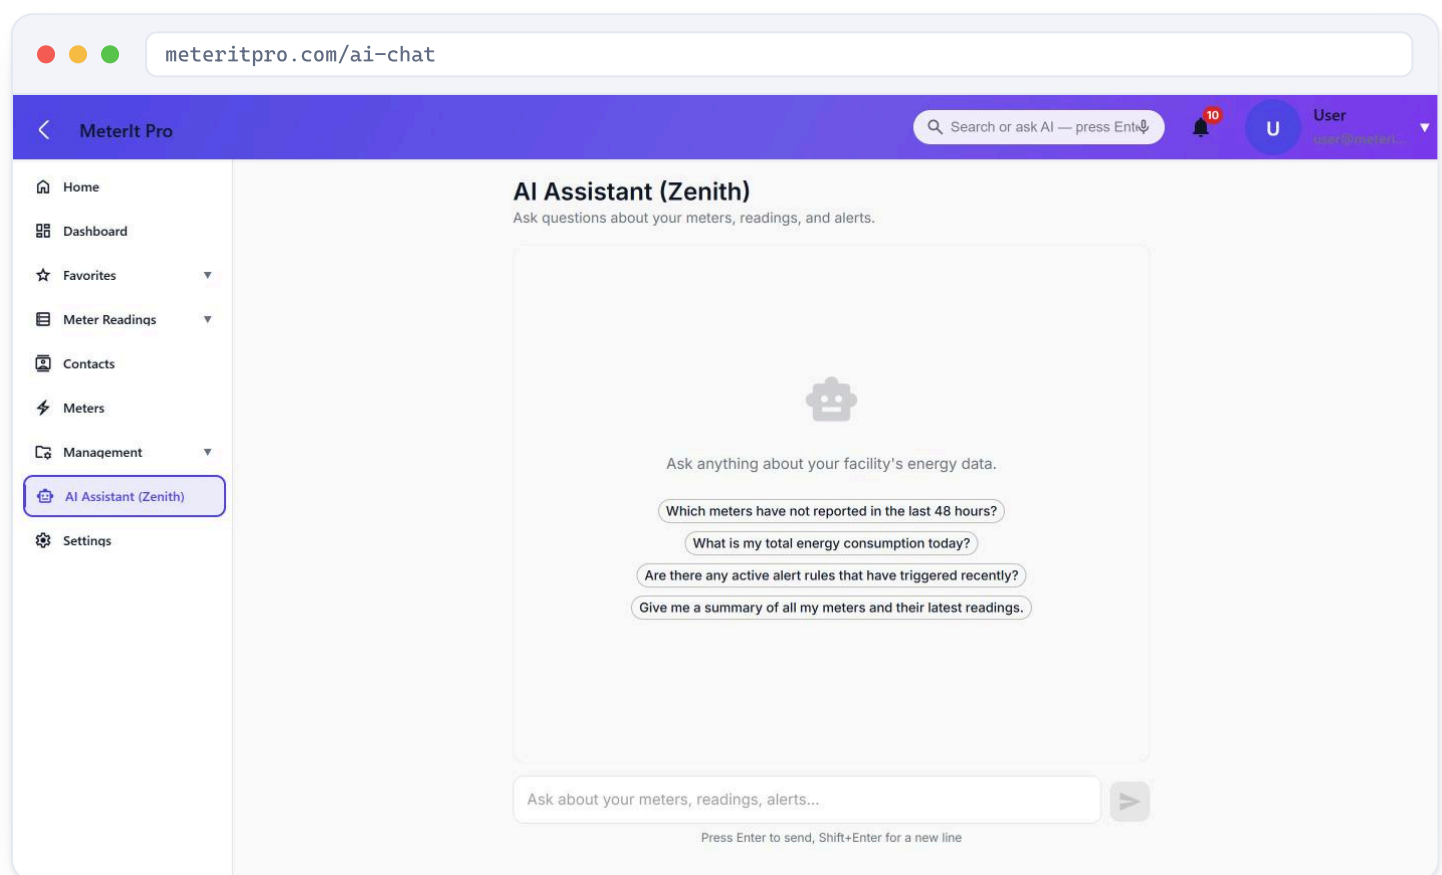

Zenith AI Assistant

Query meters, readings and alerts in plain language — no reports to build, no filters to configure. Zenith reads across your whole portfolio and answers in seconds.

Ask questions like

- “Which meters haven't reported in 48 hours?”
- “Which alert rules triggered this week?”
- “What is my total consumption today?”
- “Summarize peak demand across all sites.”

Zenith assistant — a plain-language front door to your meter data, with suggested prompts to get started. Built for AI integration from day one.

On-Site Sync Server

The MeterIt Pro Sync Server is a compact, sealed, **Linux-based** appliance installed on-site. It talks directly to your meters over **BACnet and IP** and, critically, **keeps metering even when the internet goes down** — then catches the cloud up automatically once the connection returns. The hardened Linux image is fast to redeploy and built for optimal, unattended uptime.

Resilient by Design — No Data Gaps

ONLINE · NORMAL

Meter & stream live

Polls every meter on the local network at 15-minute intervals and streams readings to the MeterIt Pro cloud in real time.

INTERNET OUTAGE

Keeps metering offline

If the site loses internet, the Sync Server keeps polling and buffers every reading to local storage. Nothing is lost.

RECONNECTED

Auto-uploads & back-fills

When the connection returns, buffered readings upload automatically to the production site and back-fill the timeline — no gaps, no manual steps.

Sync Server Specifications

Processor	Intel Core i5-8400T	Cores / clock	6C · up to 3.3 GHz · 35 W
Memory	16 GB DDR4	Storage	512 GB SSD
Operating system	Linux-based (hardened)	Graphics	Intel UHD 630
Networking	Gigabit Ethernet (RJ-45)	Ports	USB 3.1 · USB-C · 2× DP · HDMI
Form factor	Micro (≈1.2 L chassis)	Dimensions	36 × 182 × 178 mm
Power	65 W external adapter	Meter protocols	BACnet · IP
Local buffering	Full readings retained offline	Recovery	Fast reimage & redeploy
Uptime	24/7 unattended operation		

Enclosure

- Lockable steel wall-mount enclosure
- Sealed, dust- & tamper-resistant
- Ventilated for continuous 24/7 operation

Also Houses

- UPS battery backup for ride-through power
- Network switch for meter & uplink runs
- Cable glands for clean, sealed entry

Specifications

Device Compatibility

MANUFACTURER	DESCRIPTION	MODEL NO.	TYPE	ELEMENTS
DENT Instruments	PowerScout 48HD	PowerScout48HD	Electric	48
TBWC, Inc.	PS24	DI-MMU8	Electric	24
TBWC, Inc.	PS48	DI-MMU16	Electric	16
TBWC, Inc.	PS12	DI-MMU4	Electric	12
TBWC, Inc.	PS3	DI-SAKIT	Electric	3

Technical Specifications

Deployment	Fully cloud-hosted (SaaS)	On-premises servers	None required
Access	Any modern browser	Tenancy	Multi-tenant, isolated
Access control	Role-based (RBAC)	Transport security	HTTPS / TLS
Meter focus	Electricity only	Meter models	Physical & virtual
Reading interval	15 min (typical)	Export formats	PDF · CSV · Email
Site sync	Edge sync-server agents	Meter protocols	BACnet · IP
Integrations	AI querying · CSV · REST API		

Platform Capabilities

- Physical & virtual electricity meters
 - Per-register readings, graphs & alerts
 - Custom dashboards & analytics
 - Multi-site portfolio management
- Threshold, no-reading & zero-reading alerts
 - PDF / CSV export & scheduled email
 - Zenith AI plain-language querying
 - On-site Sync Server with offline resilience
